PROFESSIONAL SUMMARY

Frontend Developer with 2.5+ years of experience building scalable web applications using React.js, Next.js, TypeScript, and modern frontend technologies. Experienced in developing analytics dashboards, OCR-based document platforms, and recruitment systems with reusable component architecture and API integrations. Familiar with Python, Django, and FastAPI for backend development and full-stack collaboration. Skilled in optimizing application performance and delivering responsive user experiences in Agile environments.

TECHNICAL SKILLS

Programming Languages

- JavaScript (ES6+), TypeScript, Python

Frontend Technologies

- React.js, Next.js, HTML5, CSS3, Tailwind CSS, Bootstrap, Styled Components

Backend

- Python, Django, FastAPI

APIs

- REST APIs, tRPC

Databases

- MySQL, ClickHouse

Frameworks & Libraries

- React Query (TanStack Query), TanStack Router, AG Grid, AG Charts, Vite

Version Control

- Git, GitHub

Development Tools

- Visual Studio Code

PROFESSIONAL EXPERIENCE

Frontend Developer

TSSS Infotech & Infra Pvt. Ltd.

Hyderabad, Telangana, India

Project-1: Auto QA Analytics & Recruitment Platform.

Client: UnifyCX - Louisville, Kentucky, US. Mangalore, Karnataka, India.

Role: Frontend Developer

Project Overview:

Developed a data-driven platform combining Agent performance analytics (Auto QA) and Recruitment management module, enabling organizations to monitor workforce performance, evaluate candidates, and streamline hiring workflows across multiple geographies.

Key Responsibilities:

- Developed interactive React.js dashboards for monitoring agent performance across multiple clients.
- Integrated ClickHouse APIs to display high-volume analytics data efficiently.
- Built interactive charts for call quality, compliance, and performance trends.
- Developed recruitment workflows for candidate applications, assessments, and hiring status tracking.
- Implemented AG Grid-based tables for managing thousands of candidate records.
- Collaborated with backend teams to integrate REST APIs and optimize frontend performance.

Project-2: OCR-Based Document Intelligence Platform.

Client: Point Wild (Pango), Boston, US.

Role: Frontend Developer.

Project Overview:

Developed a scalable web application that processes and extracts structured data from various document types (handwritten, scanned, and digital PDFs) using OCR technology, enabling users to review, validate, and manage extracted information efficiently.

Key Responsibilities:

- Developed a scalable React.js application for processing and managing OCR-extracted data from handwritten, scanned, and digital documents.
- Built reusable UI components and document review interfaces for viewing, validating, and editing extracted information.
- Integrated OCR services and FastAPI-based REST APIs to transform unstructured documents into structured, editable data.
- Implemented efficient data fetching and caching using React Query and tRPC to improve application performance.
- Collaborated with backend teams to integrate APIs and deliver seamless document processing workflows.
- Optimized frontend performance and ensured a responsive user experience across multiple document workflows.

Technologies: React.js, TypeScript, TanStack Router, Vite, Linaria, Styled Components, tRPC, REST APIs, FastAPI, PostgreSQL, Git, GitHub.

EDUCATION

Master of Computer Applications (MCA)

Loyola Institute of Technology and Management, Sattenapalli
